

THE COST:

WHEN BUDGETS MATTER - MAXIMIZE YOUR RETURN ON INVESTMENT.

Electricity is much more than just another commodity; it is the lifeblood of the economy and our quality of life. Failure to meet the expectations of society for universally available low-cost power, is simply not an option. The infrastructure of the power delivery system must keep pace with escalating demand. **Sentry-DS** is designed to allow your transformer fleet to be used through end-of-life without danger of explosion and fire due to failure.

The Sentry Depressurization System does not put out fires. It Prevents them from happening in the first place.

“We Create a Safer Industry for Countless Generations to Come”

Cost of Purchased Power, Stress to other Equipment, Environmental Fines, PR nightmare

Transformer Explosions lead to:

- Large Fires
- Plant outages
- Environmental pollution
- Human life risk
- Huge costs
- Ruined company reputation

SENTRY DS ***FAST DEPRESSURIZATION FOR TRANSFORMERS***
